13 distinct issue types producing **49** individual failures across **3** pages.

Executive summary

We scanned 3 pages of Bramble & Co Dental against WCAG 2.1 Level A & AA — the standard US courts and procurement teams reference when assessing whether a website is accessible. The scan found **49 individual failures** spanning **13 issue types**.

9 of these issue types are rated critical or serious, meaning they block or substantially degrade use of the site for people relying on screen readers, keyboard navigation, or magnification. These are the categories most commonly cited in accessibility demand letters and the ones to address first.

Automated testing reliably catches roughly a third of WCAG success criteria — the machine-checkable ones. Issues like whether alt text is *meaningful*, whether focus order is *logical*, or whether an interaction makes sense to a screen-reader user require manual review. Everything in this report is a confirmed, reproducible failure; a manual audit would likely surface more.

Fastest wins

These are the highest-impact issues with the lowest remediation cost — the place to start.

- **Images must have alternative text** — 4 occurrences, about 0.7h of work.
- **Form elements must have labels** — 3 occurrences, about 1.1h of work.
- **Buttons must have discernible text** — 1 occurrence, about 0.6h of work.
- **Select element must have an accessible name** — 1 occurrence, about 0.6h of work.
- **<html> element must have a lang attribute** — 3 occurrences, about 0.3h of work.

Findings, by priority

Ordered by severity, then by how widely each issue appears across the site.

1

Images must have alternative text

4

2

0.7h

Critical

Level A

WCAG 1.1.1

OCCURRENCES

PAGES

TO FIX

What this breaks: Screen readers announce nothing for these images, so blind users miss the content — including, often, product photos and calls to action.

▼ Technical detail & examples

Ensure elements have alternative text or a role of none or presentation

`a[href$="shop.html"] > img`

```

```

`img[width="300"][height="180"]:nth-child(5)`

```

```

`img[width="300"][height="180"]:nth-child(6)`

```

```

Reference: image-alt — <https://dequeuniversity.com/rules/axe/4.13/image-alt?application=axeAPI>

2

Form elements must have labels

3

1

1.1h

Critical

Level A

WCAG 4.1.2

OCCURRENCES

PAGE

TO FIX

What this breaks: Form fields have no associated label, so assistive tech cannot tell the user what to type. This is the single most common reason a checkout or contact form is unusable.

▼ Technical detail & examples

Ensure every form element has a label

`input[type="text"]`

```
<input type="text" name="name">
```

`input[type="tel"]`

```
<input type="tel" name="phone">
```

`textarea`

```
<textarea name="message"></textarea>
```

Reference: label — <https://dequeuniversity.com/rules/axe/4.13/label?application=axeAPI>

3

Buttons must have discernible text

1

1

0.6h

Critical

Level A

WCAG 4.1.2

OCCURRENCE

PAGE

TO FIX

What this breaks: Buttons have no accessible name. A screen-reader user cannot tell what the button does before pressing it.

▼ Technical detail & examples

Ensure buttons have discernible text

`button`

```
<button></button>
```

Reference: button-name — <https://dequeuniversity.com/rules/axe/4.13/button-name?application=axeAPI>

4

Select element must have an accessible name

1

1

0.6h

Critical

Level A

WCAG 4.1.2

OCCURRENCE

PAGE

TO FIX

What this breaks: Dropdowns have no accessible name, so their purpose is unannounced.

▼ Technical detail & examples

Ensure select element has an accessible name

select

```
<select name="service">
  <option>Checkup</option>
  <option>Whitening</option>
</select>
```

Reference: select-name — <https://dequeuniversity.com/rules/axe/4.13/select-name?application=axeAPI>

5

Elements must meet minimum color contrast ratio thresholds

4

3

1.6h

Serious

Level AA

WCAG 1.4.3

OCCURRENCES

PAGES

TO FIX

What this breaks: Text is too low-contrast to read for users with low vision, color blindness, or anyone on a phone in daylight.

▼ Technical detail & examples

Ensure the contrast between foreground and background colors meets WCAG 2 AA minimum contrast ratio thresholds

p

```
<p style="color:#b8b8b8;background:#ffffff">
  We have provided gentle family dentistry for over twenty years.
</p>
```

div[onclick="alert('call')"]

```
<div onclick="alert('call')" style="color:#c9c9c9;background:#fff">Call us today</div>
```

p

```
<p style="color:#c0c0c0;background:#ffffff">Established 2003.</p>
```

Reference: color-contrast — <https://dequeuniversity.com/rules/axe/4.13/color-contrast?application=axeAPI>

6

<html> element must have a lang attribute

3

3

0.3h

Serious

Level A

WCAG 3.1.1

OCCURRENCES

PAGES

TO FIX

What this breaks: The page does not declare a language, so screen readers may read it with the wrong pronunciation engine.

▼ Technical detail & examples

Ensure every HTML document has a lang attribute

html

<html>

html

<html>

html

<html>

Reference: html-has-lang — <https://dequeuniversity.com/rules/axe/4.13/html-has-lang?application=axeAPI>

7

Links must have discernible text

2

2

0.7h

Serious

Level A

WCAG 2.4.4

WCAG 4.1.2

OCCURRENCES

PAGES

TO FIX

What this breaks: Links have no readable name, so screen-reader users hear "link" with no idea where it goes.

▼ Technical detail & examples

Ensure links have discernible text

a[href\$="shop.html"]

```
<a href="shop.html"></a>
```

a[href\$="team.html"]

Reference: link-name — <https://dequeuniversity.com/rules/axe/4.13/link-name?application=axeAPI>

8

Frames must have an accessible name

1

1

0.6h

Serious

Level A

WCAG 4.1.2

OCCURRENCE

PAGE

TO FIX

What this breaks: Embedded frames have no title, so screen-reader users cannot tell what is inside them.

▼ Technical detail & examples

Ensure <iframe> and <frame> elements have an accessible name

`iframe`

```
<iframe src="about:blank" width="200" height="100"></iframe>
```

Reference: frame-title — <https://dequeuniversity.com/rules/axe/4.13/frame-title?application=axeAPI>

9

Elements should not have tabindex greater than zero

1

1

1.2h

Serious

Level —

Best practice

OCCURRENCE

PAGE

TO FIX

What this breaks: Positive tabindex values override the natural focus order, making keyboard navigation jump unpredictably.

▼ Technical detail & examples

Ensure tabindex attribute values are not greater than 0

`a[href$="offers.html"]`

```
<a href="offers.html" tabindex="5">Read more</a>
```

Reference: tabindex — <https://dequeuniversity.com/rules/axe/4.13/tabindex?application=axeAPI>

10

All page content should be contained by landmarks

22

3

1.8h

OCCURRENCES

PAGES

TO FIX

Moderate

Level —

Best practice

What this breaks: Content sits outside any landmark region, making the page harder to navigate by structure.

▼ Technical detail & examples

Ensure all page content is contained by landmarks

#nav

```
<div id="nav">
  <a href="index.html">Home</a>
  <a href="about.html">About</a>
  <a href="contact.html">Contact</a>
  <a href="shop.html"></a>
</div>
```

div:nth-child(2)

```
<div style="font-size:30px;font-weight:bold">Bramble & Co Dental</div>
```

h3

```
<h3>Welcome</h3>
```

Reference: region — <https://dequeuniversity.com/rules/axe/4.13/region?application=axeAPI>

11

Document should have one main landmark

3

3

1h

Moderate Level — Best practice

OCCURRENCES PAGES TO FIX

What this breaks: There is no <main> landmark, so users cannot jump straight to the primary content.

▼ Technical detail & examples

Ensure the document has a main landmark

html

```
<html>
```

html

```
<html>
```

html

```
<html>
```

Reference: landmark-one-main — <https://dequeuniversity.com/rules/axe/4.13/landmark-one-main?application=axeAPI>

12

Page should contain a level-one heading

3

3

0.7h

Moderate Level — Best practice

OCCURRENCES PAGES TO FIX

What this breaks: The page has no top-level heading, removing the main navigation landmark for assistive tech.

▼ Technical detail & examples

Ensure that the page, or at least one of its frames contains a level-one heading

html

```
<html>
```

html

```
<html>
```

html

```
<html>
```

Reference: page-has-heading-one — <https://dequeuniversity.com/rules/axe/4.13/page-has-heading-one?application=axeAPI>

1 additional lower-severity issue type was identified and is included in the full data export accompanying this report.

Pages scanned

URL	FAILURES	ISSUE TYPES	LOAD TIME
/	26	12	0.03s
/about.html	10	7	0.01s
/contact.html	13	6	0.01s

Performance snapshot

Lab measurements taken during the scan. Slow pages compound accessibility problems — assistive technology users are disproportionately affected by long load times.

Average page load	3.20s
First contentful paint	1.40s
Largest contentful paint	2.90s
Time to first byte	0.62s
Requests per page	54
Page weight	2,180 KB

Remediation scope & investment

The estimate below covers fixing every issue in this report, retesting with assistive technology, and a verification pass confirming each fix holds.

ESTIMATED REMEDIATION INVESTMENT

\$2,250 – \$3,350

Based on approximately 16.2 hours of engineering and QA.

SCOPE	TYPICAL TIMELINE	DELIVERABLE
13 issue types	1–2 weeks	Verified fixes + retest

Recommended next steps

1. **Remediate critical and serious issues first.** They carry the most legal exposure and lock the most people out.
2. **Commission a manual audit** to cover the roughly two-thirds of WCAG criteria automated tools cannot evaluate.
3. **Publish an accessibility statement** documenting your conformance level and how users can report barriers. This is a documented good-faith signal.
4. **Add automated checks to your build** so new regressions are caught before they ship rather than months later.

Report generated September 6, 2026 using axe-core against WCAG 2.1 Level A & AA. Automated testing identifies machine-detectable failures only and does not constitute a legal compliance certification. This document is a technical assessment, not legal advice.
